

ASQ CRE Prep course

Lesson II. A. 7. d.

SPC and Process Capability

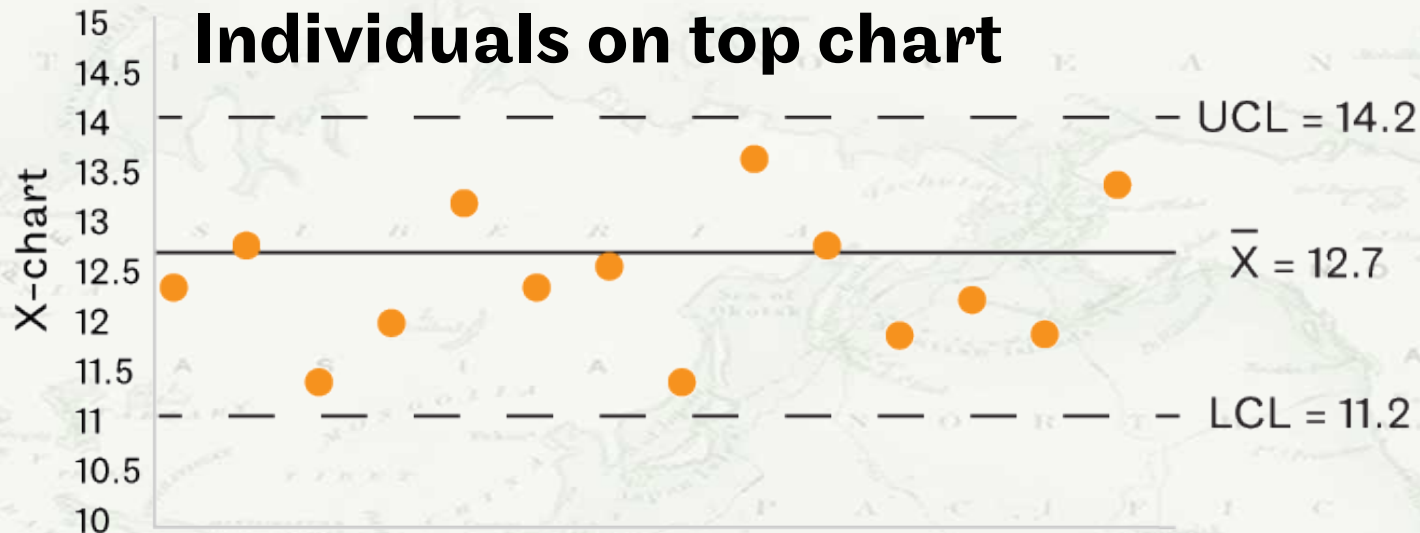

Individual & Moving Range Charts

We just don't have enough data

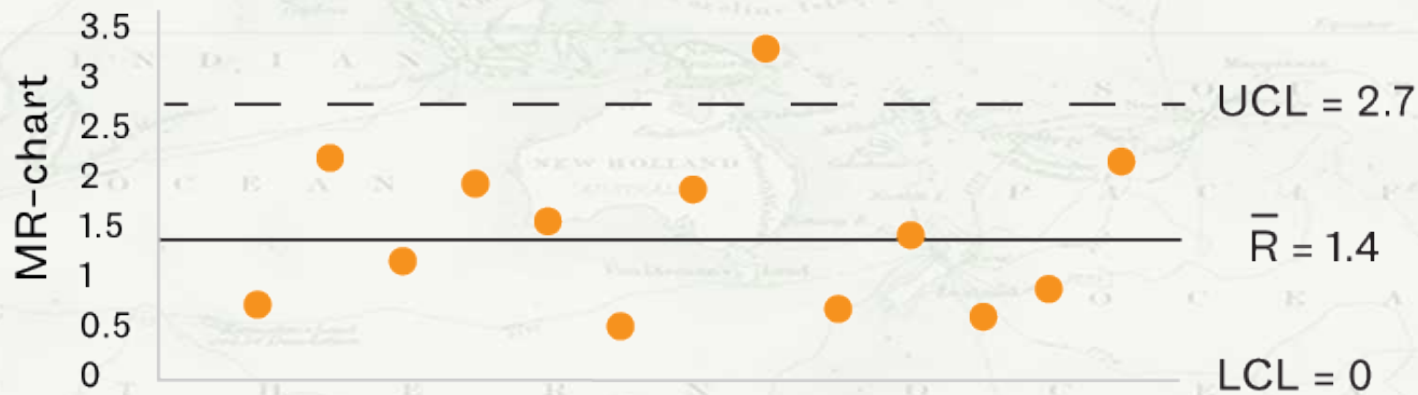

INDIVIDUALS & MOVING RANGE CHART

Individuals on top chart

Range between last point and new point

X and MR chart

- **Data should be normally distributed**
- **Averages and limits will have variability**
- **Not as sensitive as X-bar & R charts**

$$UCL_x = \bar{X} + E_2 \overline{MR}$$

$$LCL_x = \bar{X} - E_2 \overline{MR}$$

$$UCL_{MR} = D_4 \overline{MR}$$

n	2	3	4	5
D ₄	3.27	2.57	2.28	2.11
D ₃	0	0	0	0
E ₂	2.66	1.77	1.46	1.29

MX-bar and MR Chart

- **A variation of X-bar and R chart**
- **Suitable when less data is available**
- **Moving groups of n readings provide the averaging. $n=3$ is common.**
- **Use X-bar and R chart formulas to define limits**

What are a few
applications?
