

# ASQ CRE Prep course

Lesson III. A. 3.

FMEA and FMECA

A common risk assessment tool

# FMEA / FMECA

# Concept

**Effects – severity rating**

**Occurrence – probability rating**

**Controls – detection rating**

**RPN = Severity x Probability x Detection**

# Projector Lamp Design FMEA (with missing or incorrect elements for teaching purposes)

| Function                                                                                          | Potential Failure Mode     | Potential Effect(s) of Failure           | S<br>E<br>V | Class | Potential Cause(s)                                                                                                               | O<br>C<br>C | Current Design Controls (Prevention)  | Current Design Controls (Detection)        | D<br>E<br>T | R<br>P<br>N | Recommended Action(s)                                                                                                                         |
|---------------------------------------------------------------------------------------------------|----------------------------|------------------------------------------|-------------|-------|----------------------------------------------------------------------------------------------------------------------------------|-------------|---------------------------------------|--------------------------------------------|-------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Provide reliable light for image transfer at a minimum of 1000 lumens for 2000 hours of operation | lamp burns out prematurely | no light on image, customer dissatisfied | 8           |       | hot spots on glass due to over touching                                                                                          | 5           | ANSI Guideline for incandescent bulbs | Lamp environmental test #123               | 3           | 120         | Implement new glass coating to minimize impact of touching on bulb durability                                                                 |
|                                                                                                   |                            |                                          |             |       | gas leak at base of glass due to overheating                                                                                     |             |                                       |                                            |             |             | Revise Lamp environmental test #123 to include periodic touching of glass                                                                     |
|                                                                                                   |                            |                                          |             |       | inadequate voltage to lamp due to corrosion of base                                                                              |             | 8                                     | Sneak circuit analysis on projector system | 7           | 448         | Change lamp base to material ABC in order to be less corrosive.                                                                               |
|                                                                                                   |                            |                                          |             |       | Revise Lamp durability test #456 to add corrosion inducement and checking.                                                       |             |                                       |                                            |             |             |                                                                                                                                               |
|                                                                                                   |                            |                                          |             |       | Revise the interface between bulb base and electrical connection to ensure positive connection, with increased connection force. |             |                                       |                                            |             |             |                                                                                                                                               |
|                                                                                                   | lamp shatters              | no light, potential for injury to user   | 10          |       | over pressure in lamp due to wrong gas                                                                                           | 2           | Projector lamp Design Guide #ABC      | Lamp durability test #456                  | 8           | 160         | Install additional plastic shield on projector to ensure no injury to user if glass shatters.                                                 |
|                                                                                                   |                            |                                          |             |       |                                                                                                                                  |             |                                       |                                            |             |             | Modify projector lamp Design Guide #ABC to include correct bulb gas.                                                                          |
|                                                                                                   |                            |                                          |             |       |                                                                                                                                  |             |                                       |                                            |             |             | Conduct Design of Experiments on projector bulb gas to determine the optimum gas specification to desensitize bulb pressure to gas variation. |
|                                                                                                   |                            |                                          |             |       |                                                                                                                                  |             |                                       |                                            |             |             | Modify Lamp durability test #456 to include induced gas pressure build up.                                                                    |
|                                                                                                   | low light output           | user may have difficulty viewing image   | 6           |       | lamp filament has low resistance due to wrong filament material                                                                  | 3           | Projector lamp design guide #ABC      |                                            | 2           | 36          |                                                                                                                                               |
|                                                                                                   |                            |                                          |             |       | slow gas leak due to customer abuse during installation                                                                          |             |                                       |                                            |             |             | Modify lamp durability test #456 to include moderate customer abuse during installation process.                                              |

Example courtesy of Carlson, Carl. *Effective FMEAs Achieving Safe, Reliable, and Economical Products and Processes Using Failure Mode and Effects Analysis*. Hoboken, N.J.: John Wiley & Sons, 2012

# Basic Steps to Accomplish

- **Review the process**
- **Brainstorm potential failure modes**
- **List potential effects of each failure mode**
- **Assign a severity rating for each effect**
- **Assign an occurrence rating for each failure mode**
- **Assign a detection rating for each failure mode and/or effect**
- **Calculate the risk priority number for each effect**
- **Prioritize the failure modes for action**
- **Take action to eliminate or reduce the high risk failure modes**
- **Calculate the resulting RPN after changes occur**

# Failure Mechanism v Failure Modes

**Failure mode is what the customer experiences – the symptom of a problem**

**Failure mechanism is the physics or chemistry – the cause of a problem**

**Sometimes the causal chain is long**

Is it useful to  
outsource an  
FMEA?
