

# ASQ CRE Prep course

Lesson III. A. 12.

Reliability Apportionment  
(Allocation) Techniques

The budget

# APPORTIONMENT

# Concept and Use

**Break down the  
reliability objective to  
subsystems and  
components**

**Start the discussion**

# Equal Apportionment Technique

**Given 5 subsystems  
and goal of 95%  
reliable at one year,  
what is goal for each  
subsystem?**

# ARNIC Apportionment Technique

- **Assumes constant failure rate**
- **Estimate failure rate for each subsystem**
- **Calculate weighting as a proportion of subsystem failure rate to overall**
- **Then calculate subsystem failure rate requirement**

Is this necessary?
